

## Question D:

I have an application that displays a list of people through handlebars. I use mongoDB as the database for all my data.

If I go to my /people route I see my list like this:

WEB322 - Test 5

### People

Person ID	Full Name	Phone Number	City	Car Vin
1	Eudora De Mattia	529-713-0002	Libacao	3N1CN7AP6EL561139
2	Mady Rankom	735-861-0412	Wuxia	5N1BA0ND0FN927332
3	Gabi Ashard	626-210-1807	Libacao	JN8AE2KP0D9490697
4	Arin Shillabeare	910-617-9608	Wuxia	JHMZF1D61ES643865
5	Reuben Adair	800-959-1236	Libacao	KMHFG4JG5DA778797
6	Ricard Di Biasi	221-910-2636	Sanchang	SALFR2BG4EH262840
7	Normy Velareal	420-940-6736	Wuxia	JN1CV6EK8DM097980
8	Livvy Foulgham	347-958-6861	Wuxia	WAUSH78E87A957827

However, when I run a **query by city** (<http://localhost:8080/people?city=Wuxia>) which should return all people in that city I only get this result:

WEB322 - Test 5

### People

Person ID	Full Name	Phone Number	City	Car Vin
2	Mady Rankom	735-861-0412	Wuxia	5N1BA0ND0FN927332

Using the provided handlebars page and code snippets in the test.js

Tell me **what the problem is**, and **how to fix it**.

**Note:** We can assume the server and database are set up correctly and there is no issues with the names of data members.
